ABOUT ME

I am diving into the Token world with the goal of creating intelligent agents that can support my work, organize my life, and free more time for deep thinking, building networks, and exploration.

WORKING EXPERIENCE

AI Engineer at FPT AI Center - AI4SE Laboratory Jan 2024 — Present

- **Mainframe Studio:** Backend engineer building a platform for mainframe code analysis, modernization workflows, and developer-facing legacy system intelligence.
- **Code Review Agent:** Led engineering for an agentic system that automates code review, code analysis, and bug localization across enterprise software projects.
- **Metis:** Led engineering for wiki generation over large-scale codebases across multiple programming languages, improving codebase understanding and technical documentation.

AI Engineer at Resonance Technology Apr 2022 — Oct 2023

- **WriterZen AI Copilot:** Researched and built a prototype AI copilot for end-to-end SEO workflow automation, content planning, and competitive analysis.
- **In-App AI Features:** Led R&D for prompt-based product features, increasing platform user engagement by 83.7%.
- **SERP Clustering Engine:** Designed high-performance clustering algorithms, improving processing speed by 40% and reducing memory usage by over 5x.

Data Scientist at Be Group Jul 2021 — Apr 2022

- **Be Food Search:** Built ranking algorithms that improved search relevance and increased top recommendation click rates from 55% to 70%.
- **Drop off Recommendation:** Designed a personalized recommendation model, increasing recommendation clicks by 8%.
- **Customer Support AI:** Developed a Rasa-based conversational platform and FastText semantic search engine for automated customer support workflows.

Research Assistant at NLP@UIT Laboratory, University of Information Technology Feb 2020 — Feb 2022

- **COVIDROP Dataset:** Created the first Vietnamese numerical reasoning dataset based on DROP for reading comprehension over COVID-19 news.
- **Annotation System:** Designed annotation guidelines and labeling tools to support high-quality Vietnamese NLP data collection.
- **Model Benchmarking:** Implemented and evaluated NAQANet and NumNet baselines for Vietnamese numerical reasoning research.

PROJECTS

OpenDev [GitHub](#)

- Contributed to an open-source, terminal-native coding agent for parallel agent execution and multi-model development workflows.

CADAgent [GitHub](#)

- Built an AI-powered CAD copilot on top of FreeCAD, adding an in-app agent interface for 3D parametric modeling workflows.

EDUCATION

Master of Science (M.Sc.) in Computer Science , <i>University of Information Technology</i> GPA: 3.7/4.0	Sep 2023 – Present
Bachelor of Science (B.Sc.) in Data Science , <i>University of Information Technology</i> GPA: 3.6/4.0 (<i>Top 1 in Major</i>) <i>Thesis: "Numerical Reasoning Reading Comprehension on Vietnamese COVID-19 News: Task, Corpus, and Challenges"</i>	Sep 2018 – Jan 2022

SKILLS

- **AI-Native Development:** Able to work with coding agents such as Claude Code, Cursor, Codex, and Antigravity to build products, automate workflows, and ship end-to-end software systems.
- **Interests:** Multi-agent orchestration, long-horizon tasks, and training deep learning models.
- **Languages:** Vietnamese (Native), English (C1)
